Preventive maintenance of pneumatic tube system stations, diverters and blowers ensures your hospital's system runs at its peak, seamlessly supporting the material delivery needs of lab, pharmacy, blood bank and nursing professionals.

## BENEFITS OF PREVENTIVE MAINTENANCE INCLUDE:

### Increased system uptime

Every item hand delivered by a healthcare professional while the system is down increases costs and adversely impacts patient care. Preventive maintenance increases system uptime, enabling medical staff to stay focused on their jobs.

### Reduced system alarms

Alarms not only slow material delivery, they add to the workload of maintenance professionals. Preventive maintenance reduces alarms, thereby reducing unexpected interruptions to the already busy schedule of maintenance staff.

### Extended service life of equipment

Integral to the operation of a successful hospital, the pneumatic tube system is a valuable asset. Preventive maintenance extends the life of the system, ensuring its return on investment pays well into the future.

### Maximum transaction throughput

Faster deliveries means more deliveries. More significantly, it means pharmaceuticals, specimens and blood products quickly get to where they are needed so healthcare professionals can do their job and patients receive timely care.

Pevco also offers preventive maintenance programs for systems made by other manufacturers.

**CALL 1-800-296-7382 or go to [WWW.PEVCO.COM](http://WWW.PEVCO.COM) to learn more.**

To keep your Pevco system at its peak, take advantage of our Premier or Basic Preventive Maintenance Programs. Both offer multiyear discounts and are customizable with one to four visits annually.

With Pevco's Premier Preventive Maintenance Program, in addition to the work included with a Basic Program, you receive:

- Two free tuitions for Pevco's technician factory training class
- One free service call for every two preventive maintenance visits
- 15% discount on Pevco spare part orders
- 15% discount on service call labor
- A Pevco technician tool kit and bag

With Pevco's **Basic Preventive Maintenance Program**, Pevco factory trained technicians examine every station, diverter and blower, ensure each piece of equipment is operating at its peak and provide a post-inspection report. Basic Preventive Maintenance includes the following tasks:

## STATIONS >

- Inspect and tighten hardware and wiring
- Clean receive bin, control panel and dispatch arm
- Inspect CID, carrier and bin sensor
- Inspect, clean and adjust slide plate
- Inspect carriers
- Adjust carrier counts

## DIVERTERS >

- Inspect and tighten hardware and wiring
- Clean diverter tray, face plate and lubricate chain
- Inspect seals and replace as needed
- Inspect sensors
- Inspect brake and adjust as needed
- Check port alignment and adjust as needed

## BLOWERS >

- Inspect and tighten hardware and wiring
- Clean air shifter, cage, face plate and lubricate chain
- Inspect seals and replace as needed
- Inspect vacuum sensor and pressure sensor
- Inspect brake and adjust as needed
- Check port alignment and adjust as needed
